QUICK OUTLOOK

10 May 2020

Confirmed cases 1 new case

30 active cases
18 imported
1 under investigation
38 Local transmission
30 Males 27 Females
Median age (range) 34.3 (6-75) years

24 recoveries
3 deaths
10 Districts affected
1337 tests conducted
9 testing sites

Highlights

- One new COVID-19 case, 10 new recoveries, and no new deaths have been recorded in the past 24 hours.
- Cumulatively, Malawi has registered 57 confirmed cases of COVID-19 (30 active cases), 3 deaths, and 24 recoveries.
- 1337 tests have been conducted to date.
- 328 close contacts to COVID-19 confirmed cases have been tested to date.
- 174 people transporting essential goods and services have entered the country in the past 24 hours.

Background

On 31 December 2019, the World Health Organization (WHO) was alerted of several cases of pneumonia of unknown cause detected in Wuhan City, Hubei Province of China. Later the disease was named Coronavirus disease-19 (COVID-19) and the virus was named Sars-Cov2. World Health Organization declared the COVID-19 outbreak a pandemic on 12th March 2020.

On 20 March 2020, COVID-19 was declared a national disaster in Malawi, and on 2 April 2020, Malawi registered the first cases of COVID-19. His Excellency the President of the Republic of Malawi, Prof. Arthur Peter Mutharika gave a press briefing to inform the nation. On 6 May 2020, the President of the Republic of Malawi appointed a Presidential Taskforce on COVID-19 that is co-chaired by Dr. John Phuka from the College of Medicine and Minister of Finance, Economic Planning, and Development.

Global situation

As of 010 May 2020, WHO reported that 3,917,366 cases (61,578 new) have been reported globally, including 274,361 deaths (8,499 new). Out of these cases, 42,626 cases (2,082 new) and 1,369 deaths (47 new) are in Africa. Table 1 below shows the number of reported cases and deaths in the countries that share boundaries with Malawi.

Local situation
In the past 24 hours, Malawi has registered one new COVID-19 case in Mulanje. The new case is a 27-year-old man who arrived from South Africa on 27th April and was on self-isolation until developing symptoms. No new deaths and 10 new recoveries have been reported in the past 24 hours.

Cumulatively, Malawi has recorded 57 cases (24 in Lilongwe, 16 in Blantyre, 8 in Thyolo, 3 Mzuzu, 1 in Zomba, 1 in Chikwawa, 1 in Nkhotakota, 1 in Karonga, 1 in Mangochi and 1 in Mulanje) including 3 deaths (2 in Lilongwe and 1 in Blantyre).

**Figure 1** is a map of Malawi showing the number of cases in each affected district. Of the 56 cases, 38 were locally transmitted while 18 were imported and 1 is still under investigation. Twenty four of the total cases have now recovered (6 in Blantyre, 15 in Lilongwe, 1 in Chikwawa, 1 in Nkhotakota and 1 in Zomba) bringing the total number of active cases to 30. The median age of the cases is 34.3 years, the youngest case is aged 6 years and the oldest is 75 years. **Table 3**, and **Figures 2, 3, and 4** show a detailed breakdown of cases.

Currently, Malawi has officially closed all borders except three borders to allow transit of essential goods and services. In the past 24 hours, 174 personnel transporting essential goods and services entered Malawi. Active tracing and monitoring of contacts of confirmed COVID-19 are ongoing, currently, a total of 574 contacts of COVID-19 cases have been traced out of which 328 have been tested. **Table 2** below provides a summary statistics of surveillance activities.

Summary of Prevention and Response Activities

Laboratory testing
Currently, there are nine COVID-19 testing sites in the country; the National Health Reference laboratory (NHRL) in Lilongwe, College of Medicine (COM) laboratory, and Malawi Liverpool Wellcome Trust (MLW) in Blantyre, Mzuzu Central Hospital laboratory, Mzimba south district hospital laboratory, Balaka Dream laboratory in Balaka, Zomba Central Hospital laboratory, Thyolo district hospital laboratory and Nsanje district hospital laboratory. As of 10 May 2020, a total of 1337 samples have been tested, with 57 positive results and 29 pending results. Table 4 below shows the breakdown of tests done by each laboratory.

In preparation for establishing a testing site at Karonga site Malawi Epidemiology and Intervention Research Unit (MEIRU), the laboratory team is being trained on testing COVID-19. Additionally, laboratory personnel in 29 districts and 4 central hospitals are also being trained on COVID-19 sample collection, packaging, transportation, and laboratory data management.

Clinical case management
- 28 active cases are being managed as outpatients and are under self-isolation
- 2 cases are institutionalized
- Cumulatively 24 cases have now recovered and 3 have died
- 5 health care works in Blantyre have tested positive

Enforcement and security
- Police and MDF deployed to provide border security patrols
- Road traffic police enforcing new seating capacity for public transportation
- Control of crowds in public and private service outlets (e.g. banks)
- Joint patrols on Lake Malawi (MDF and Immigration)
- Roadblocks mounted in strategic points across the country
Point of entry
- Monitoring personnel transporting essential goods and services
- All borders closed except 3 for essential personnel travel (e.g. petroleum services and other goods).

Logistics
- Deliveries to districts of supplies from UNICEF is done
- Deliveries to districts of supplies from Chinese donation in progress – besides the districts, this also accommodates Army, Prison, and Police

Risk communication and community engagement
- The national team deployed to northern region to strengthen district teams in community engagement and management of cases
- Continued airing of COVID-19 public service announcements on community and national radio stations.
- Daily press briefings on the evolving outbreak situation
- Daily updates through ZODIAK radio
- Set up interactive COVID-19 messages on Airtel *929#
- Production and printing of fact sheets, posters, leaflets, and roll-up banners.
- Push messages on Airtel and TNM in both English and Chichewa.
- Community awareness meetings in progress
- Develop messaging for public service announcements to suit the current measures on lockdown.
- Mobile van units for the distribution of information, education and communication materials in Lilongwe, Blantyre, and Mangochi

Coordination
In order to facilitate coordination and maintain focused efforts towards combating COVID-19 we hold routine and ad-hoc meetings:
- Presidential Task Force on COVID-9 was established and they meet regularly
- Weekly health cluster meetings
- Weekly meetings of technical committees for the various response pillars
- Daily surveillance technical committee meetings
- Daily emergency operation center meetings
- Implementation of the national response plan

Case definitions
1. Suspect Case
   a. A patient with acute respiratory illness (fever and at least one sign/symptom of respiratory disease, e.g. cough, shortness of breath), AND a history of travel to or residence in a location reporting community transmission of COVID-19 disease during the 14 days prior to symptom onset.
   b. A patient with any acute respiratory illness AND having been in contact with a confirmed or probable COVID-19 case in the last 14 days prior to symptom onset;

   OR
   c. A patient with severe acute respiratory illness (fever and at least one sign/symptom of respiratory disease, e.g. cough, shortness of breath; AND requiring hospitalization) AND in the absence of an alternative diagnosis that fully explains the clinical presentation

2. Probable Case
   a. A suspect case for whom testing for COVID-19 is inconclusive. Inconclusive being the result of the test reported by the laboratory
OR
b. A suspect case for whom testing could not be performed for any reason.

3. Confirmed Case
   a. A person with laboratory confirmation of COVID-19 infection, irrespective of clinical signs, and symptoms.

4. Definition of contact
   a. A primary contact is a person who experienced any one of the following exposures during the 2 days before and the 14 days after the onset of symptoms of a probable or confirmed case:
      i. Face-to-face contact with a probable or confirmed case within 1 meter and for more than 15 minutes;
      ii. Direct physical contact with a probable or confirmed case;
      iii. Direct care for a patient with probable or confirmed COVID-19 disease without using proper personal protective equipment
   Note: for confirmed asymptomatic cases, the period of contact is measured as the 2 days before through the 14 days *after the date on which the sample was taken* which led to confirmation.
   b. A secondary contact is a person who was in contact with the primary contact or any contact which does not meet the definition of the primary contact.

5. COVID-19 death
   COVID-19 death is defined for surveillance purposes as a death resulting from a clinically compatible illness in a probable or confirmed COVID-19 case unless there is a clear alternative cause of death that cannot be related to COVID disease (e.g. trauma). There should be no period of complete recovery between illness and death.

Classification of transmission patterns

- **No cases:** Countries/territories/areas with no confirmed cases
- **Sporadic cases:** Countries/territories/areas with one or more cases, imported or locally detected
- **Clusters of cases:** Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exposures
- **Community transmission:** Countries/area/territories experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to:
  1. Large numbers of cases not linkable to transmission chains
  2. Large numbers of cases from sentinel lab surveillance
  3. Multiple unrelated clusters in several areas of the country/territory/area

Conclusion
The Ministry of Health and partners continue in its efforts to ensure the citizens are protected from the Coronavirus outbreak and that the country is able to detect and respond to any cases that may arise.
- Toll-free call line with Chipatala Cha Pa Foni (number: 54747).
